Lake Almanor, CA 96137

Almanor Dock Supply has been serving customers at Lake Almanor since 1968. The current owner, Bret Womack, has operated the business for the past 17 years. He has developed two proprietary dies that were built for us by Kaiser Aluminum. These dies enable us to offer the heaviest frame aluminum dock, capable of withstanding the worst conditions any lake or river has to offer.

Almanor Dock Supply has been serving customers at Lake Almanor since 1968. The current owner, Bret Womack, has operated the business for the past 17 years. He has developed two proprietary dies that were built for us by Kaiser Aluminum. These dies enable us to offer the heaviest frame aluminum dock, capable of withstanding the worst conditions any lake or river has to offer.

See The Difference!

Our perimeter frame is a full 11' tall and 4 1/2' wide box tube with an internal stiffener! A competing product uses much less rigid 8' tall x 1/2' vertical element. We go further with our unique design!

Another vender by comparison builds docks with 1 1/2' x 1 1/2' aluminum tube to support the decking. We are the only manufacturer that fully braces the internal framing with torsional blocks side-to-side throughout the dock.

Stainless Steel Self-retracting Cleats.

We also offer services to install your dock at the beginning of the season, weekly dock patrol to adjust your dock for lake level changes, and removal and storage of your dock at the end of the season.
